domain contains a file server named Server1 that runs Windows Server 2012 R2.You create a user account named User1 in the domain. You need to ensure that User1 can use Windows Server Backup to back up Server1. The solution must minimize the number of administrative rights assigned to User1. What should you do? A. Add User1 to the Backup Operators group.B. Add User1 to the Power Users group.C. Assign User1 the Backup files and directories user right and the Restore files and directories user right.D. Assign User1 the Backup files and directories user right. Answer: DExplanation:Backup Operators have these permissions by default:

However the question explicitly says we need to minimize administrative rights. Since the requirement is for backing up the data only--no requirement to restore or shutdown--then assigning the "Back up files and directories user right" would be the correct answer. Back up files and directories

This user right determines which users can bypass file and directory, registry, and other persistent object permissions for the purposes of backing up the system.

Specifically, this user right is similar to granting the following permissions to folders on the system:

- Traverse Folder/Execute File
- List Folder/Read Data
- Read Attributes
- Read Extended Attributes
- Read Permissions

QUESTION 23You have a server named Server1 that runs Windows Server 2012 R2 and is used for testing. A developer at your company creates and installs an unsigned kernel-mode driver on Server1. The developer reports that Server1 will no longer start. You need to ensure that the developer can test the new driver. The solution must minimize the amount of data loss. Which Advanced Boot Option should you select? A. Disable Driver Signature EnforcementB. Disable automatic restart on system failureC. Last Known Good Configuration (advanced)D. Repair Your Computer Answer: AExplanation:A. By default, 64-bit versions of Windows Vista and later versions of Windows will load a kernel- mode driver only if the kernel can verify the driver signature. However, this default behavior can be disabled to facilitate early driver development and non-automated testing. B. specifies that Windows automatically restarts your computer when a failure occurs C. Developer would not be able to test the driver as needed D. Removes or repairs critical windows files, Developer would not be able to test the driver as needed and some file loss

QUESTION 24 Hotspot Question Your network contains an Active Directory domain named contoso.com. You have a Dynamic Access Control policy named Policy1. You create a new Central Access Rule named Rule1. You need to add Rule1 to Policy1. What command should you run? To answer, select the appropriate options in the answer area.

Explanation: <http://technet.microsoft.com/en-us/library/hh846167.aspx> QUESTION 25 Your network contains an Active Directory domain named contoso.com. The domain contains two member servers named Server1 and Server2. All servers run Windows Server 2012 R2. Server1 and Server2 have the Failover Clustering feature installed. The servers are configured as nodes in a failover cluster named Cluster1. You add two additional nodes in Cluster1. You have a folder named Folder1 on Server1 that hosts application data. Folder1 is a folder target in a Distributed File System (DFS) namespace. You need to provide highly available access to Folder1. The solution must support DFS Replication to Folder1. What should you configure? A. Affinity-None B. Affinity-Single C. The cluster quorum settings D. The failover settings E. A file server for general use F. The Handling priority G. The host priority H. Live migration I. The possible owner J. The preferred owner K. Quick migration L. The Scale-Out File Server Answer: E

QUESTION 26 Your network contains an Active Directory domain named contoso.com. The domain contains two member servers named Server1 and Server2. All servers run Windows Server 2012 R2. Server1 and Server2 have the Network Load Balancing (NLB) feature installed. The servers are configured as nodes in an NLB cluster named Cluster1. Port rules are configured for all clustered applications. You need to ensure that Server2 handles all client requests to the cluster that are NOT covered by a port rule. What should you configure? A. Affinity-None B. Affinity-Single C. The cluster quorum settings D. The failover settings E. A file server for general use F. The Handling priority G. The host priority H. Live migration I. The possible owner J. The preferred owner K. Quick migration L. The Scale-Out File Server Answer: G Explanation:

QUESTION 27 Hotspot Question Your network contains two Web servers named Server1 and Server2. Both servers run Windows Server 2012 R2. Server1 and Server2 are nodes in a Network Load Balancing (NLB) cluster. The NLB cluster contains an

application named App1 that is accessed by using the name appl.contoso.com. The NLB cluster has the port rules configured as shown in the exhibit. (Click the Exhibit button.)

To answer, complete each statement according to the information presented in the exhibit. Each correct selection is worth one point.
